

THE RIGHT DATA. THE RIGHT DECISIONS.

The Platform to Transform Your Decision-Making

Quantexa Helps Create Resilient, Confident Data-driven Organizations

Quantexa's Decision Intelligence (DI) Platform gives you the ability to take messy, siloed data, and stitch it together into the most trusted, reusable resource across your organization.

It connects billions of data points across internal and external data sources, to provide single views of data enriched with context from the network of relationships between people, organizations and places.

It's open, modular and integrated approach enables augmented and automated decision-making that allows your people to do their best work. It scales across applications giving repeatable and scalable processes with predictable costs, leveraging existing investments to proactively and efficiently assist all lines of business.

With a wealth of experience in multiple sectors, we have used our open technology to build world-class solutions using DI as the base with proven results in public and private enterprises globally.

Accurate

- 99% matching accuracy for single views
- 20% proven deduplication of records
- Over 75% reduction in false positive alerts

Open

- Easy-to-integrate into your existing tech stack
- Flexible, modular platform easily configured into your operations
- Extensible with multiple views & use cases

Fast

- Accelerate deployment & time to value with low-code, schema free data ingestion
- Scale up to 60 billion records in a single day
- Reduce analysis time from weeks to hours

Secure

- Advanced permissioning and role-based data access
- White-box Machine Learning models
- Transparent scoring and alerts

records

How We Solve the Data Quality Problem

Today's data landscape is far from perfect, and data is often incomplete or of poor quality.

Quantexa's Entity Resolution ensures truly effective decisioning, as it is able to consolidate and match data with high accuracy and create single views, providing confidence that there are no duplicates. We also give you the ability to fix and enrich data sets with third party data.

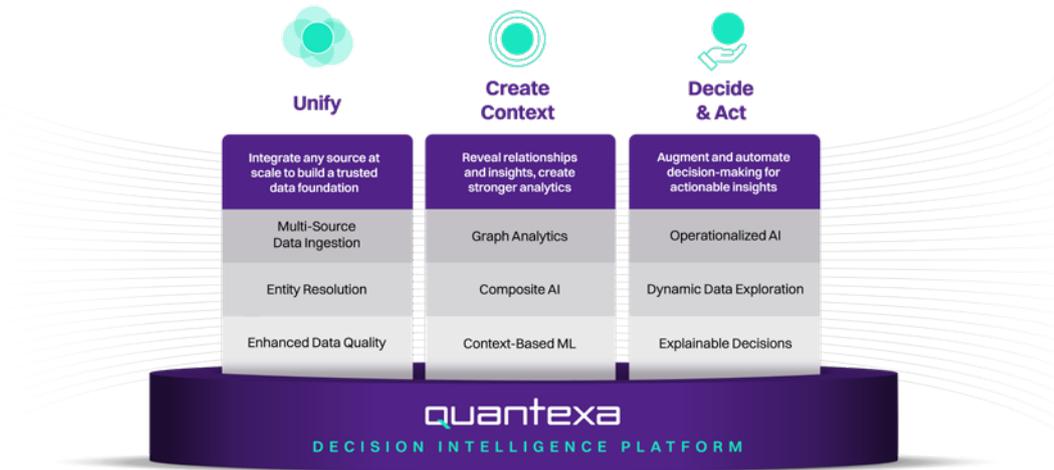

You'll also have full visibility of your data in context with other related data. Network Generation automatically finds the most relevant connections for your business

problem. By using Dynamic Graphs, we link entities to all the available details in real-time, for example, your customer's profile with what products and services they have across different business units, what their payment regularity is, how they are connected to potential prospects or if they associate with organizations and people that are flagged as risky.

Quantexa also supports Dynamic Entity Resolution, which gives unique flexibility across multiple use cases and informs granular and extensive security protocols.

The Platform to Transform Your Decision-Making

An open and modular enterprise platform for outcome-driven solutions

Unify

- Accelerate your data onboarding with low-code, scalable, high performance data preparation and ingestion.
- Connect disparate and ambiguous data at scale with unprecedented accuracy to create complete views of people, organizations, places and other data.
- Improve data quality as part of the unification process.

Create Context

- Reflect real world relationships, revealing the context of how people, organizations, places and other entities interact with each other.
- Improve AI's versatility and efficiency in decisioning models by combining different techniques.
- Build stronger predictive models by using contextual enrichment to help you build better features.

Decide & Act

- Seamlessly deploy AI models into real-time production environments with the right data and context.
- Empower teams to search for and visualize data in rich detail, including relevant relationships, transactions, and behaviors.
- Increase confidence in analytics and automated decisions with open and transparent models.

A single place to get joined up, reusable data for any business problem

Data Management

Build a trusted data foundation to maximize value from your data, addressing challenging master data and data quality problems, and making contextualized data available where it can make a difference.

KYC

Leverage a rich single client view to automatically facilitate a contextual, perpetual and realistic understanding of risk throughout the customer relationship.

Customer Intelligence

Build a 360 ° view of customers, prospects and relationships to drive more effective prospecting, personalized customer engagement, targeted cross-sell and upsell and improve customer retention .

Financial Crime

Consolidated enriched intelligence and specific risk identification and detection for the purpose of building a complete picture of a customer's behavior across their transactional activity (AML).

**Unified,
trusted data
foundation**

Risk

Unite and maximize disconnected data and operations, automate and align lending decisions and improve customer experiences to facilitate precise and sustainable lending.

Fraud

Build a risk-based model that alerts to complex fraud typologies, uncovers previously hidden risk and accelerates investigations.
